

STILL **HARDCODING** YOUR **DB** **CONFIG?**

HERE'S HOW TO **CONNECT**
SPRING BOOT TO POSTGRESQL
THE MODERN WAY

The Problem 🤪

Why some Spring Boot + PostgreSQL Setups Fail in Production?

-  **Environments behave differently**
-  **Silent failures from misconfigured JPA dialects**
-  **Confusing schema behavior from ddl-auto**

There's a better way... >>>

The Professional Approach 🤩

Let's use a clean, production-ready stack:

- Spring Boot 🌿
- PostgreSQL 🐘
- Spring Data JPA ☕

+

What You'll Learn

Add the right dependencies

Essential libs for JPA and PostgreSQL

Configure your database

Clean, reliable JDBC property setup

Create a JPA entity + repository

Model and persist your data

Expose real API endpoints

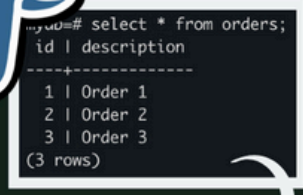

Connect frontend or test clients
